System
Laser diode properties

Compact disc digital audio system
Material: GaAlAs
Wavelength: 780 nm
Emission duration: Continuous
Laser output: Less than 44.6 μ W
(This output is the value measured at a distance of 200 mm from the objective lens surface on the Optical Pick-up Block.)
20-20,000 Hz: \pm dB
Line output (stereo minijack)
Output level 1 V rms at 47 kilohms
Load impedance over 10 kilohms
Headphones (stereo minijack)
9 mW + 9 mW at 32 ohms

Frequency response
Output (at 9 V input level)

General

Power requirements

Supplied:
• Rechargeable battery pack BP-3
• DC IN 9 V jack accepts the Sony AC power adaptor for use on 120V AC, 60 Hz (US, Canadian) for use on 220V/240V AC, 50 Hz (AEP, UK, E, Australian)

Optional:
• Sony EBP-3 battery case using four size AA (LR6) batteries, 6V (supplied: UK)
• DC IN 9 V accepts: Sony CPM-100P mount plate for use on 12 V car battery 1.2 W DC

Power consumption
Dimension

Approx. 136 \times 36.8 \times 147 mm ($5\frac{3}{4}$ \times $1\frac{1}{2}$ \times $5\frac{7}{8}$ in.) (w/h/d)
not incl. inclined part (depth), projecting parts and controls
Approx. 137.5 \times 38.8 \times 149 mm ($5\frac{1}{2}$ \times $1\frac{5}{8}$ \times $5\frac{7}{8}$ in.) (w/h/d)
incl. projecting parts and controls

Weight

Approx. 480 g (1 lb 1 oz) net
Approx. 655 g (1 lb 7 oz) incl. rechargeable battery pack

Supplied accessories

AC power adaptor (1)
Rechargeable battery pack (1)
Connecting cord (1)
Carrying case (1)
Carrying belt (hand belt: French) (1)
Headphone (1) (UK)
AC plug adaptor (1) (E)

Supplied battery pack

Output voltage
Capacity
Dimensions
Weight

6V
1000 m Ah
Approx. 31.3 \times 17.3 \times 118.6 mm ($1\frac{1}{4}$ \times $1\frac{3}{8}$ \times $4\frac{3}{4}$ in.) (w/h/d)
Approx. 180 g ($6\frac{3}{4}$ oz)

Charging time/Battery life

Charging time	Continuous disc playing time
8 hours (fully charged)	approx. 4 hours
5 hours (90% charged)	approx. 3.5 hours

Notes on charging

- For charging, use only the supplied AC power adaptor. If not, the player will be damaged.
- The CD player can also be operated during charging. In this case, approx. 24 hours are necessary for a full charge. However, when the CD player does not operate normally, stop it and charge the unit for a while.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

SECTION 1 GENERAL

LOCATION AND FUNCTION OF CONTROLS

*AMS is an abbreviation of Automatic Music Sensor.

SECTION 2 SERVICING NOTES

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK Δ OR DOTTED LINE WITH MARK Δ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE Δ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

Before Replacing the Optical Block

Please be sure to check thoroughly the parameters as per the "Optical Block Checking Procedures" (Part No. : 9-960-027-11) issued separately before replacing the optical block. Note and specifications required to check are given below.

- FOK output : IC501 ⑨pin
When checking FOK, remove the lead wire to disc motor and unsolder and open IC801 ②pin (FOK).
- S curve P-to-P value : 3Vp-p
When checking S curve P-to-P value, remove the lead wire to disc motor.
- Adjusted part for focus gain adjustment : RV501
- RF signal P-to-P value : 0.7 - 1.25Vp-p
- Traverse signal P-to-P value : 1.5Vp-p
- The repairing grating holder is impossible.
- Adjusted part for tracking gain adjustment : RV502

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe more than 25cm away from the objective lens.

Laser Diode Check Procedure

The laser diode on this set will not emit unless the top panel is closed and S801 (leaf SW type) is turned on. The laser diode will always emit even if focus search is not performed in service mode.

The laser diode is checked using the current value which flows to the laser diode inside the optical pick-up block.

Procedure 1 (service mode or normal operation)

Check the laser diode emission with the eye.

1. Open upper panel.
2. S801 on as Fig. 1.
(In service mode, this operation is not necessary.)
3. Press the ► key.
(In service mode, this operation is not necessary.)
4. Observe the objective lens and confirm that the laser diode is emitting light. At this time, the laser diode goes on about 10 seconds due to focus search. If it does not, APC circuit or optical pick-up block is defective.

Fig.1 Turning S801 on

Procedure 2 (service mode or normal operation)

Check by the current with flows in the laser diode.

1. Close the top panel.
2. Remove the main board and read the current value on the label affixed to the UPF.
(Label on optical pick-up block)

The current value varies with the set.

3. Connect a VOM as shown in Fig. 2.
4. Press the ► key.
5. Calculate the current by the VOM reading.
VOM reading (V) $\div 10$ = current (A)
ex. VOM reading = 0.56V
 $0.56 \div 10 = 0.056$ (A) = 56 (mA)
6. Confirm that the ammeter reading is within the range given below.
value on label: 54.6mA (25°C)
variation relative to temperature: 0.4mA/°C
(Current increases when temperature rises and decreases when it drops.)

If the value is more than the range give, APC circuit has been defective or the laser diode has deteriorated. If it is less, APC circuit or optical pick-up block is defective.

Fig.2 VOM Connection

SERVICE MODE (service program)

This set has built-in service program in the microcomputer as usual sets.
The operation method of service program is explained below.

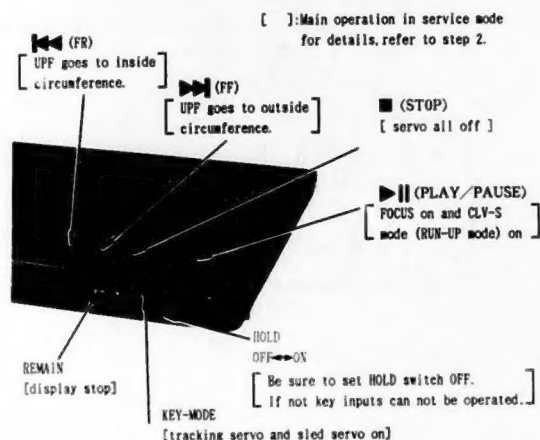

Fig.3 Key Positions

• Step 1 (Service Mode setting method)

1. Turn the HOLD switch OFF with the external power supply not plugged in (no power applied to set) and press the **▶▶** key.
2. Solder jumper TEST terminal.
(IC801 pin 24 (TEST) is grounded.)
3. Plug in external power supply.
This puts the set into service mode.

• Step 2 (Service Mode operation)

1. When service mode is set, the display will change 6 times, and those 6 changes will be repeated over and over.
With this the LCD display should be present in service mode. Even if LCD does not display, other operations will be performed.
2. When **▶▶** or **◀◀** key is pressed, the UPF moves to the inside or outside circumference. Tracking servo and sled servo go off when this is done, so press KEY-MODE to turn on the tracking servo if necessary.
3. When REMAIN is pressed, the display stops. When REMAIN is released, the display continues to change. This allows check of each segment.
4. When **▶▶** Key is pressed, CLV-S (pull-in mode) starts while performing focus search. When there is no disc installed, focus search is repeated several times while disc motor is rotating.
5. When KEY-MODE is pressed, tracking servo, sled servo and CLV-A (servo during PLAY) go ON.
6. When 4 and 5 are performed, the disc begins to play. At this time, the top panel should be closed and S801 are to be ON. A sound is not produced as muting is ON.
7. All servo (focus, tracking, sled and spindle) go off when **■** key is pressed.

• Step 3 (Service Mode release)

1. First be sure to unplug the external power supply, then remove the solder jumper TEST terminal.
2. The set will now operated normally.

Fig.4 TEST terminal position

SECTION 3 ELECTRICAL ADJUSTMENTS

Notes on Adjustment

1. Perform adjustments except for RECHARGEABLE VOLTAGE ADJUSTMENT in service mode.
Be sure to release service mode after completing adjustment.
(Refer to "Service Mode (service program)" on page 4.)
2. Perform adjustments in the order given.
3. Use YEDS-18 disc (part No.: 3-702-101-01) unless otherwise indicated.
4. Power supply voltage: DC 9V
HOLD switch: OFF

PREPARATION

Put the set into service mode (See page 4.) and perform the following checks. Repair if there are any abnormalities.

• Sled Motor Check

1. Press the OPEN button and open the top panel.
2. Press the **▶▶**, **◀◀** keys and make sure that the opticl pick-up block moves smoothly, without catching, from the inmost → outmost → inmost circumference.
▶▶: opticl pick-up block moves outward
◀◀: opticl pick-up block moves inward

• Focus Search Check

1. Press the OPEN button and open the top panel.
2. Press the **▶▶** key. (Focus search is performed continuously.)
3. Observe the opticl pick-up block objective lens and check that it moves smoothly up and down with no catching or noises.
4. Press the **■** key.
Check that focus search operation stops. If it does not, press the **■** key again.

VC (1/2 Vcc) Connecting Point

FOCUS BIAS ADJUSTMENT

TRACKING BALANCE ADJUSTMENT

When the adjustments above are performed, connect the ⊖ side of oscilloscope to the point below.

PLL Free Run Frequency Check and Adjustment

Check/Adjustment Procedure :

1. Disconnect EFM solder jumper terminal in the diagram below.
2. Connect a frequency counter to main board test point TP(PLCK).
3. Put the set into service mode (See page 4).
4. Check that the frequency counter reading is 4.31 ± 0.01 MHz. If not, adjust RV505 so that it is 4.31 ± 0.01 MHz.
5. After adjustment, release service mode (see page 4).
6. Short the jumper terminal disconnected in step 1.

Check/Adjustment Location : main board

EFM solder jumper terminal

Tracking Balance Adjustment

Conditions :

The set should be placed either horizontally.

Adjustment Procedure :

1. Connect the oscilloscope to main board TP(TE).
2. Put the set into service mode (See page 6).
3. Press the **▶▶** and **◀◀** keys to move the optical pick-up block to the center.
4. Insert the disc (YEDS-18) and close the top panel.
5. Press the **▶▶** key.
(It will go from focus search to focus on, and CLV pull-in mode state. Tracking and sled are OFF.)
6. Adjust RV503 so that the oscilloscope waveform is symmetrical on the top and bottom in relation to 0V.

Note : Take sweep time as long as possible to obtain best waveform.

7. Unplug the external power supply to stop spindle motor from rotating.
8. After adjustment, release service mode (see page 4).

Adjustment Location : main board

Focus Bias Adjustment

Adjustment Location : main board

Conditions :

The set should be placed either horizontally.

Adjustment Procedure :

- Put the set into service mode (See page 4).
- Connect the oscilloscope to main board test point TP(RF).
- Press the **▶▶** and **◀◀** key to move the optical pick-up block to the center. (Move the optical pick-up block to the music area on the disc to enable easy visibility of the eye pattern).
- Insert the disc (YEDS-18) and close the top panel.
- Press the **▶▶** key.
(It will go from focus search to focus on, and CLV pull-in mode state. Tracking and sled are OFF.)
- Press the KEY-MODE button. (Tracking and sled go ON.)
- Adjust RV504 so that the oscilloscope waveform eye pattern is good. A good eye pattern means that the diamond shape (◇) in the center of the waveform can be clearly distinguished.

• RF Signal Reference Waveform (eye pattern)

VOLT/DIV : 200mV

TIME/DIV : 500ns

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

- Unplug the external power supply to stop spindle motor from rotating.
- Remove the disc and connect the oscilloscope to main board TP(FE).
- Adjust RV503 again referring to the table followed.

voltage of TP(FE)	adjustment
more than +100mV	Not adjust again.
-50 to 100mV	Adjust RV503 again for +100mV reading on oscilloscope.
less than -50mV	Not adjust again.

- After adjustment, release service mode (see page 6).

Reference

Focus/Tracking Gain Adjustment

A frequency response analyzer or CD jig is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up followup (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate. However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is high, the noise when the 2-axis device operates increases.
- When gain is low, it is more susceptible to mechanical shock and skipping occurs more easily.

This adjustment is to be performed when replacing the following parts :

- UPF (optical pick-up block)
- RV501 (focus gain volume)
- RV502 (tracking gain volume)

On this set, it is very difficult to simplify this adjustment. For those sets on which symptoms such as "occasional skipping" are hard to discover, or it is hard to tell if the set has been repaired, use the CD jig and perform this adjustment. Refer to the diagram below for connection of the CD jig. The adjustment procedure is described in the separate CD jig Instruction Manual.

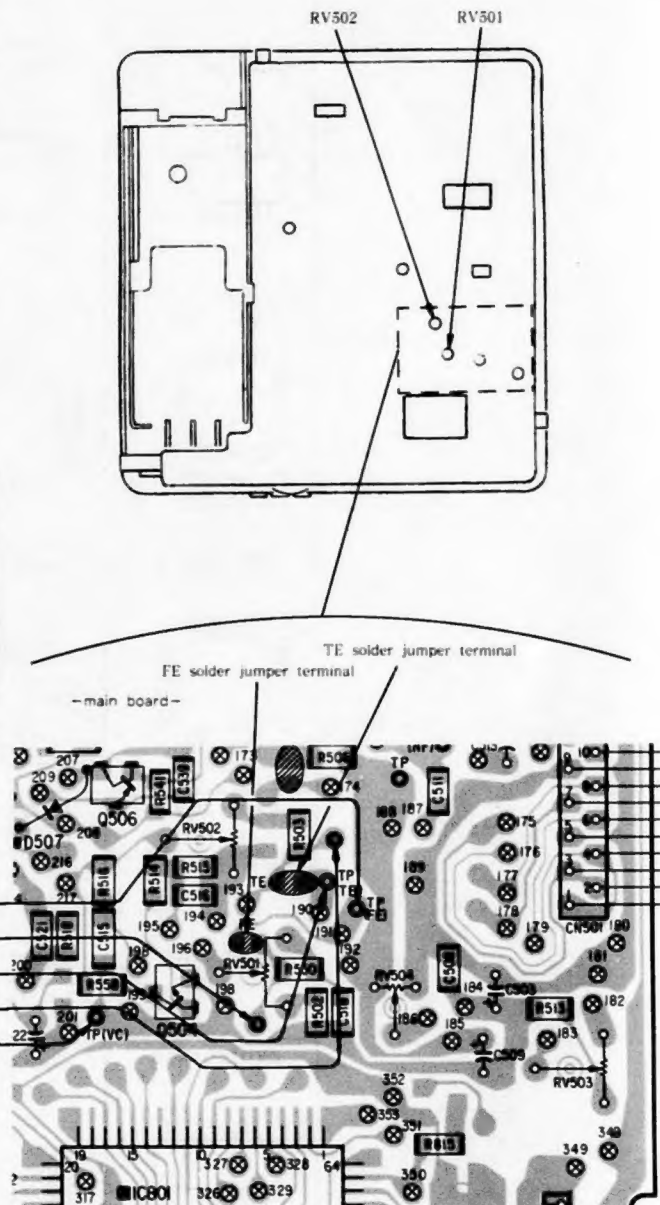

Please be careful not to move RV501 (focus gain volume), RV502 (tracking gain volume) ordinarily.

CD jig connection :

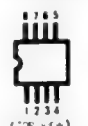

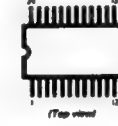

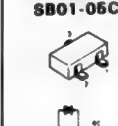

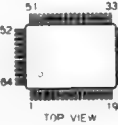

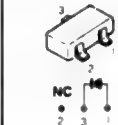

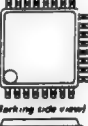

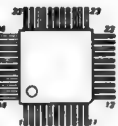

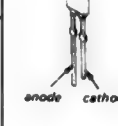

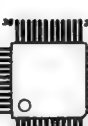

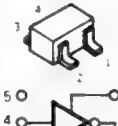

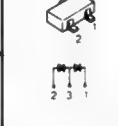

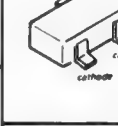

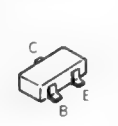

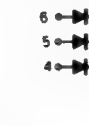

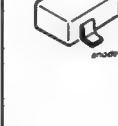

CD jig
